The Integralift (230kg)

Cabinet Based Lifter

Despite its discreet appearance, the Integralift is a highly effective and finely engineered piece of equipment. Developed and manufactured in Europe it boasts reliable mechanics and a robust build quality that will ensure year after year of trouble-free operation. As well as its subtle appearance, the Integralift also provides time-saving conveniences such as permanent storage points for sling, spreader bar and remote control. It operates from mains power with battery backup, with optional down lights within the cabinetry. Safety is assured with the emergency stop function, combined with electric or manual emergency lowering options. Integralift has a 230kg SWL capacity

Summary

- When not in use, Integralift blends perfectly with interior décor, maintaining a tidy & pleasant environment
- When the hoist is required, opening the vertical reveals the spreader bar & remote contact. Using the spreader bar as a handle, swing the boom arm into position over the patient
- Now in position, the spreader bar is lowered using the remote control to enable attachment of the sling & then raised to allow a transfer
- The boom arm it swung smoothly round to the desired transfer point, & the remote control is again used to lower to patient to the new location.
