SENTA PUR L

The combination lift for bathing and showering

The SENTA PUR L combination lift

The ideal solution for bathing and showering …

Fits in with every modern care tub ...

The SENTA PUR L showering and bathing lift is exactly the right tool to be able to shower or bathe the person needing help safely and comfortably at any time, regardless of the level of mobility of your resident. The SENTA PUR L lift is extremely easy to manoeuvre and can be applied in any type of care tub in a flexible manner.

Height adjustment is stepless via a battery-operated electric drive and therefore not distressing for the resident. The lift is operated easily and safely via a corresponding hand-held remote control and can be handled by a single staff.

Each lift is equipped with standard protection devices against overload and against collision. An integrated service module reports disturbances and maintenance due to the lifter. An integrated manual emergency lowering device is, of course, included.

Easily convertible into a stretcher lift …

The SENTA PUR L bathing lift can be easily and quickly converted into a fully adequate stretcher lift by means of optional stretcher lift modules. By default, each seat is prepared in such a way that one single staff is able to plug in the side wings without effort. This provides you with the necessary flexibility that is required without having to resort to a second lift. The seating area has a large care opening which can be closed with a cover if required.

Flexibly applicable - also for transfer from the bed. Depending on your care routine, you can also pick up your resident from the bed with our showering and bathing lift directly. The deep carrier frame allows to be passed underneath the care bed for easy transfer from the bed. Your resident can, of course, also sit down on the seat by himself. The carrier frame is formed in a way that this is possible without hindering the legs and heels.

SENTA PUR L combination lift

Offers the highest quality and comfort ...

Offers a variety of options ...

Integrated calibrated patient scale. An important factor in current care documentation is ascertaining and monitoring the weight of the resident. Our SENTA PUR L lift with integrated patient scale offers an ideal option to weigh the resident without another transfer becoming necessary.

Stretcher lift modules with optional foot rest. Two removable stretcher lift modules can easily convert the seat lift into a full stretcher lift. The modules are simply clicked into an existing safety adapter at the seat tray by means of a safety click system. Additionally, you can also obtain a pluggable foot rest.

Side rails. An optional side rail gives your resident additional hold and safety. The bracket is located under the seat and can be slid back under the seat if the side rails are not used.
